

STEAM Academy Trip to the FAA

The STEAM Academy programs from all three schools at the Black Horse Pike Regional School District went to the FAA testing facility on February 7, 2018. Students were able to tour a variety of labs that ranged from weather forecasting technology to radar and drone testing. Students were able to see how all of the STEAM disciplines interact in a real life environment.

Lockheed Martin sent a group of engineers to Timber Creek to speak to our STEAM Academy as well as other students that are interested in Engineering. After the presentation, students also participated in a mini competition to design wind turbines. The presentation and winning group is pictured below.
